SUNY Stony Brook Goes Green

Residence hall and activity center at SUNY Stony Brook.

Goshow Architects

Construction has begun on the Goshow Architects-designed residence hall and activity center at the State University of New York (SUNY) at Stony Brook. The 172,000-square-foot facility is designed to increase circulation between two adjacent quads and create a transparent connection between students and the academic institution. The 600-bed residence contains six-bed suites centered around living rooms. Sustainable features include optimal natural lighting, a highly insulated building exterior, and the use of recycled materials, according to the architects. New building technologies, such as pre-fabricated walls and locally sourced materials, will cut construction time and make for early occupancy. The residence and activity center are applying for LEED Gold certification, and occupancy is expected in Fall 2009.
